

A scatter plot illustrating a negative linear relationship. The x-axis ranges from approximately 55 to 85, and the y-axis ranges from approximately 10 to 90. A blue regression line is drawn through the data points. A red circle highlights a specific data point at approximately (78, 15), which is below the regression line. A red square is placed on the regression line at approximately (78, 20), and a blue arrow points from the red circle to the red square.
