

A scatter plot showing the relationship between Life Expectancy (X-axis) and Fertility Rate (Y-axis). The X-axis ranges from approximately 55 to 85, with major ticks at 60, 70, and 80. The Y-axis ranges from approximately 10 to 65, with major ticks at 10, 20, 30, 40, 50, and 60. A blue regression line shows a negative correlation. A red circle highlights a data point at approximately (78, 12), with a blue arrow pointing up to a red square on the regression line at the same X-value.
